

## NAME

`inclucleres` – filter to include resources in a PostScript document

## SYNOPSIS

**`inclucleres`** *<document.ps >output.ps*

## DESCRIPTION

**`Inclucleres`** includes resources (fonts, procsets, patterns, files, etc.) in place of **`%%IncludeResource`** comments in a PostScript document. The resources are searched for under the resource name, and with an appropriate extension. The pipeline

```
extractres file.ps | inclucleres >out.ps
```

will move all resources appearing in a document to the document prologue, removing redundant copies. The output file can then be put through page re-arrangement filters such as **`psnup`** or **`pstops`** safely.

## AUTHOR

Written by Angus J. C. Duggan.

## SEE ALSO

**`psutils`**(1)

## TRADEMARKS

**`PostScript`** is a trademark of Adobe Systems Incorporated.

## BUGS

**`inclucleres`** does not alter the **`%%DocumentNeededResources`** comments.
